XIC - C09D-003/66 ; C09D-005/00

AB - J57108166 A coating compsn. comprises (A) p lyester having an acid
value of 20-200 mg KOH/g, softening pt. of 80-150 deg.C and number

JP 57-108166

409

3-40 pbn
average mol. wt. of 1,000-10,000 (60-96 wt. pts.), (B) glycidyl
gp.-contg. acrylate ester or pd. from glycidyl acrylate, glycidyl
methacrylate, beta-methylglycidyl acrylate or beta-methylglycidyl
methacrylate (20-100 wt.%) and other vinylic monomer (0-80 wt.%) and
having a number average mol. wt. of 300-5,000 (3-40 wt. pts.) and (C)
epoxy resin (1-20 wt. pts.).

- The copolymerisable monomer for the acrylate polymer is typically
styrene, acrylate ester, methacrylate ester, fumarate diester,
acrylonitrile or acrylic amide. (C) is e.g. bisphenol A/diglycidyl
ether, oxybenzoic acid/glycidyl ester ether, ethylene glycol/
diglycidyl ether trimethylol propene, triglycidyl ether, terephthalic
acid/diglycidyl ester or triglycidyl isocyanurate.

- The hardening mixt. of (A) and (B) is compatible with (C) to provide
coatings having high weather resistance.

IW - WEATHER RESISTANCE RESIN COATING COMPOSITION COMPRISE POLYESTER
GLYCIDYL GROUP CONTAIN ACRYLATE ESTER POLYEPOXIDE RESIN
